CURRENT RESEARCH

"Market Structure, Emission Tax, and R&D Incentives in Cournot Oligopoly"

PhD project. A game-theoretic model of optimal emission taxation under imperfect competition, measuring market structure via product substitutability and incorporating spatial spillovers from abatement technology. Motivated by eco-industrial parks in Russia.

Keywords: emission taxation, Cournot oligopoly, environmental R&D, spatial spillovers, eco-industrial parks

"The Impact Of Environmental Policy On Firm Investment Behavior In Russia "

M.Sc. thesis (defense: June 2026). Empirical study assessing the causal effect of the 2016 Russian environmental policy reform on the share of investment in tangible assets, using Synthetic Control method and Difference Generalized Method of Moments.

Keywords: emission taxation, environmental policy, causal inference, Porter Hypothesis
